Safety. Independence. Peace of Mind.

Only from Response*LINK*

Safety *LINK* Pro

- Individual Room Monitoring System
- Separate base unit (panel) for each room.
(New units)
- All wireless communications. No wires to run
- 24 hour battery back up on base unit
- 1 water proof pendant per base unit
(can place 2 pendants on each unit if needed)
- 1 year warranty on equipment
- Professional Installation / Training for staff

Safety *LINK* Pro

- Provides 24 hour on site monitoring by your staff
- All emergency signals dial 1 to 4 specific phone numbers (cell phones) in your facility
- Each base unit (panel) programmed with resident's room number.

SafetyLINK Pro

When a resident presses their pendant, their individual base unit will dial 1 to 4 pre-programmed phone numbers in your facility (cell phone, front desk, any phone).

When the call is answered, the system will announce “Press 2 to acknowledge for 0121”. (This is the resident’s room number.) Pressing “2 on any phone” opens up the 2-way audio feature to the base unit so the person answering the call can now ask the resident what their problem / concerns might be from anywhere in your facility (the call does not have to answered at the front desk). When finished talking, the person answering the call simply presses “99” on the phone to disconnect the call. The nurse or CNA now proceeds to the resident’s apartment to assist them with their needs.

Safety *LINK Pro*

Now your staff can prioritize calls they receive by importance instead of having a call light go off and someone running to a residence's room only to find that they would like a drink of water.

Safety *LINK Pro*

If the first phone number the system dials does not get answered, the system will move to the next phone number. If no one answers any of the 1 to 4 pre-programmed numbers, the system will start over calling the first pre-programmed phone number. It will keep dialing the pre-programmed phone numbers until someone answers.
